

Product Requirements Document

Product: Ufaq Khalid — Personal Portfolio Website

Owner: Ufaq Khalid

Document type: PRD (v1)

Status: Implemented (current product)

Last updated: 15 September 2026

1. Overview

This is **Ufaq Khalid’s personal portfolio website**: a fast, single-page site that presents who she is, what she can build, and how to reach her.

A first-time visitor should immediately understand that she is a **3rd year BSCS student** who builds **practical, functional web-based systems**, and that she is **open to real project work** and growing as a developer.

Positioning

- **Who:** 3rd year BSCS student at University of Central Punjab (Gujranwala Campus), based in Gujranwala, Pakistan.
- **What she builds:** Practical web-based systems (and related academic work: DBMS apps, DSA-based game logic, requirement engineering).
- **Primary ask:** Project opportunities and junior developer work — **not internships**.

Outcome priorities

Priority	Outcome
---	---
1	Junior developer / job opportunities
2	Small freelance / “launch” clients and real-world project work
3	University project collaborators

The **#1 visitor** is a small business owner or someone with a web/software project who needs it built. Within ~30 seconds they should be able to answer: *“Can this person actually build what I need?”*

2. Goals

Over the next **3–6 months**, the site should:

1. **Showcase the three strongest academic projects** so a visitor understands what Ufaq can build without extra explanation.
2. **Make contact effortless** (email, phone, WhatsApp, and a simple form) when someone has a project or opportunity.
3. **Help start small freelance / real-world project opportunities**, not internships.
4. **Build credibility as a developer** despite no formal work experience yet.

Must-win: A visitor understands the three projects and skills, and can contact Ufaq in one click.

3. Target Audience

Primary

Small business owner or project owner who needs a web/software system built.

They will look for:

- Real project examples
- Clear skills
- An easy way to get in touch

Secondary

- Fellow students or developers reviewing the work
- University professors / academic reviewers evaluating project quality
- Formal recruiters (not the main focus; the site should still look credible if they visit)

Not the main audience

Internship-focused recruiters and internship-first messaging.

4. Site Content

Single-page site with in-page sections. English only.

4.1 Navbar

| Item | Requirement |

| --- | --- |

| Left | Name / wordmark: **Ufaq Khalid** |

| Links (order) | Home · About · Skills · Projects · Contact |

Right	Resume control
Theme	Dark theme only — no theme toggle
Social	No social icons in the navbar (footer only)

Resume control (v1): Do **not** use a broken download link. Show a “**Resume coming soon**” state until a PDF is provided.

4.2 Hero

Headline: I’m Ufaq Khalid.

Supporting line: 3rd year BSCS student building practical, functional web-based systems.

Buttons:

- Primary: **View Projects** (smooth-scroll to Projects)
- Secondary: **Download Resume** — same “coming soon” behavior until the PDF exists

Must-have facts (visible in hero, not as a photo):

- 3rd year BSCS student
- University of Central Punjab (Gujranwala Campus)
- CGPA **3.45**
- Based in Gujranwala, Pakistan
- Open to project work

Photo: None. No headshot in the hero or anywhere else.

4.3 About

Short, simple, professional, easy to read — no fancy or complicated wording.

Story:

- 3rd year BSCS student at University of Central Punjab, Gujranwala
- Enjoys building practical web-based systems and learning through real projects
- Education (CGPA 3.45, 3rd year) mentioned **briefly in copy**, plus University / CGPA / Focus stat cards

Skills: Not inside About — dedicated Skills section.

4.4 Skills

Grouped tags/pills, **glassmorphism, no icons**.

| Group | Items |

| --- | --- |

| Languages / Programming | C++, JavaScript |

Web (Front-End)	HTML, CSS
Tools	XAMPP, Visual Studio
Other	Requirement Engineering (SRS documentation, Use Case & Sequence Diagrams)

This is the full current skill set; nothing extra to list or hide.

4.5 Projects

Simple list of **3** projects. **No filters. No separate project pages.** Clicking a card **expands more detail on the same page**.

Each card:

- Title
- Short description (2–3 sentences)
- Placeholder / generic image if no real screenshot yet
- Tech stack tags **except** for the documentation-only project

No GitHub or live demo links in v1 (academic projects).

Project 1 — Smart Campus Attendance & Performance Analytics System

A web-based DBMS platform for universities to manage attendance, track performance, and generate reports.

Stack tags: MySQL, PHP, HTML, CSS, JavaScript

Project 2 — Dark Veil Odyssey

A game project built in Visual Studio applying data structures and algorithms (DSA) for game logic and interactivity.

Stack tags: Visual Studio, DSA (and related implementation details as available)

Project 3 — Online Training & Certification System

A complete Software Requirement Specification (SRS) including Use Case and Sequence diagrams for a web-based training platform.

Important: Documentation-only — **no code and no live demo**. The card must state this clearly and **must not** show coded-project tech tags (PHP/HTML/etc.). Use documentation labels (e.g. SRS, Use Cases, Sequence Diagrams) only.

4.6 Contact

Heading: Let's Work on a Project

On-page details (always visible):

- Email: ufaqkhalid1414@gmail.com
- Phone: 0322-6037970 (`tel:+923226037970`)
- **WhatsApp:** button/link using the same number so visitors can message directly (`https://wa.me/923226037970`)

Form fields: Name, Email, Message

v1 submission: Working `mailto:` (pre-filled) until Formspree is configured.

Later: Formspree forwarding to the email above — no data storage.

Success copy after submit (when a real form backend exists):

Thank you for reaching out! I really appreciate you taking the time to connect. I'll review your message and get back to you as soon as I can.

TBD (placeholders only): LinkedIn URL, GitHub profile URL.

4.7 Footer

Minimal:

- Name: Ufaq Khalid
- Tagline: **BSCS Student & Web Developer** (or equivalent)
- Email again
- Copyright: © **2026**
- Social: GitHub / LinkedIn **TBD** (omit or disable until URLs exist)

Not in footer: Back-to-top, repeated full nav.

5. Functional Requirements

Required

| ID | Requirement |

| --- | --- |

| FR-1 | Fully **responsive** layout: mobile, tablet, and desktop |

| FR-2 | **Smooth scroll** between sections (nav + hero CTAs) via `scrollIntoView (scrollToHash` utility). Offset uses `scroll-margin-top` only — do **not** also set `html scroll-padding-top`, which stacked and overshoot the heading |

| FR-3 | **Mobile hamburger** menu for navigation |

| FR-4 | Resume control that never 404s; PDF download when file exists, otherwise “coming soon” |

| FR-5 | Contact form **basic validation** (name, email format, non-empty message) |

| FR-6 | Email, phone, and **WhatsApp** actions work from Contact |

| FR-7 | Project cards **expand in place** for extra detail |

| FR-8 | Single static portfolio — **no** accounts, login, blog, or admin |

Nice-to-have

| ID | Requirement |

| --- | --- |

| NFR-UX-1 | Sticky nav **highlights the current section** while scrolling |

| NFR-UX-2 | Light **fade-in** as sections enter the viewport |

| NFR-UX-3 | Shared **.card-hover** glow (soft accent **box-shadow** only, 200ms ease) on About stats, Skills categories, Projects cards, Contact info pills, and Education card — no extra scale or border-color change on those boxes |

6. Non-Functional Requirements

| Area | Requirement |

---	---
Accessibility (v1)	Readable contrast (body copy is a brighter muted gray, e.g. <code>#c8cad6</code> on <code>#0d1117</code>); keyboard-navigable nav and form. Advanced screen-reader work is not required now
SEO	Page title and meta description, e.g. Ufaq Khalid — BSCS Student & Web Developer Portfolio
Browsers	Latest Chrome, Edge, Firefox . No support for very old browsers
Language	English only
Hosting	Deploy on Vercel , connected to the GitHub repo, when the site is ready
Contact privacy	No stored form database. v1: <code>mailto:</code> . Later: Formspree forwards to email
Analytics	Not required in v1

7. Visual / Design System

| Token | Direction |

---	---
Background	Deep navy-black <code>#0d1117</code> ; alternate sections use a slightly lighter shade (<code>#10151c</code>) so the page is not one flat block
Cards	<code>#161b22</code> , 1px low-opacity borders
Accent	<code>#6b9eff</code> — reserved for links, primary buttons, active nav, icons, and thin accent borders . Do not use it as decorative fill on labels/eyebrows

---	---
Text	Headings near-white (#f0f3f6); body muted gray (#c8cad6) for contrast on navy
Surfaces	Card surfaces with subtle borders and a shared hover glow (see <code>.card-hover</code>)
Type	Inter for body; Space Grotesk for headings (<code>h1</code> / <code>h2</code> / <code>h3</code>). Font CSS variables must be defined where Next.js <code>next/font</code> classes apply (on <code>body</code> , not only <code>:root</code>), or headings silently fall back to Times New Roman
Layout	Single page, centered content, reasonable max-width (not edge-to-edge on large screens)
Photo	None
Vibe	Minimal, techy, clean — professional but not corporate-stiff

Do not use: neon colors, excessive motion, cluttered/busy layouts.

Styling approach: global CSS (`src/index.css`) with design tokens as CSS variables. Hover on cards is `.card-hover` (`box-shadow: 0 0 20px` at 30% accent opacity, `200ms ease`).

8. Tech Stack

- | Layer | Choice | Notes |
- | --- | --- | --- |
- | App | **Next.js** (App Router) | `src/app/layout.tsx` + `src/app/page.tsx` ; not Vite or a static HTML/CSS/JS site |
- | UI | **React** | Single-page portfolio sections on / |
- | Language | **TypeScript** | |
- | CSS | Global CSS + CSS variables | `src/index.css` (not Tailwind) |
- | Fonts | `next/font` | Inter + Space Grotesk |
- | Motion | **Framer Motion** + CSS | Section/hero entrance; card hover is CSS-only |
- | In-page nav | `scrollToHash` | `src/lib/scrollToHash.ts` — `scrollIntoView({ block: 'start' })` so `scroll-margin-top` is honored |
- | Contact (later) | **Formspree** | After account + form ID exist |
- | Hosting | **Vercel** | Linked to GitHub |

No extra product features that would require a backend, CMS, or auth. Dev: `npm run dev` → `http://localhost:3000`.

9. Outstanding Content Needed

Still TBD (blockers for a “complete” live site)

| Item | v1 workaround |

| --- | --- |

Resume PDF	“Resume coming soon” — no broken link
Public GitHub profile URL	Omit or placeholder in footer
Real screenshots for 3 projects	Generic / placeholder visuals
Formspree form ID	Working <code>mailto:</code> until set up

Explicitly not needed

- Headshot / photo assets — **do not add a photo section**

Already known / ready to implement

- Name, role, tagline, bio direction
- Education: BSCS, **3rd year**, UCP Gujranwala, CGPA 3.45
- Skills list and grouping
- All 3 project titles, descriptions, and stack/documentation treatment
- Email and phone (and WhatsApp from the same number)
- Design direction (colors, type, glassmorphism)

10. Success Metrics

Timeframe: first 3–6 months. **No visit analytics** in v1.

Success looks like

- A visitor understands the **3 projects and skills** without asking extra questions

- Contact is **one click away** (email, phone, WhatsApp visible — no digging)
- The site looks **clean and professional on mobile and desktop**
- At least **one real inquiry or small project opportunity** from someone who found the site

Failure looks like

- Broken or unfinished appearance on mobile
 - Visitors cannot tell what the projects actually are
 - People cannot figure out how to contact Ufaq easily
-

11. Out of Scope (v1)

Do **not** build in this version:

- Blog, CMS, extra marketing pages
- Accounts, login, admin, dashboards
- Light/dark **theme toggle**
- Internship-first positioning or dedicated internship funnel
- GitHub / live demo links on project cards
- Separate project detail routes
- Project filters / search
- Headshot / photo
- Analytics / visit tracking
- Email automation beyond Formspree (later) or `mailto:` (now)
- Multilingual support
- Testimonials, client logos, or a services pricing page
- Advanced accessibility / screen-reader certification work
- Back-to-top control and repeated footer nav
- Extra animation libraries or heavy motion

WhatsApp is in scope (added after the first contact pass): a visible WhatsApp action using 0322-6037970.

Appendix A — Resolved decisions (interview)

---	---
Photo in hero	Originally requested; final decision: no photo
WhatsApp	Originally deferred; final decision: include
Contact backend	<code>mailto:</code> now; Formspree when ID exists
Tech	Next.js (App Router) + React + TypeScript + global CSS. Original interview said Vite/Tailwind; shipped stack is Next.js .
Projects	3 cards, expand in place, placeholders OK
SRS project	Documentation-only; call that out; no coded-stack tags
Academic year	3rd year BSCS student (not final-year)

Appendix B — Public contact (approved to publish)

- **Email:** ufaqkhalid1414@gmail.com
- **Phone:** 0322-6037970
- **WhatsApp:** <https://wa.me/923226037970>
- **Location:** Gujranwala, Pakistan

12. Changelog

15 September 2026

- **Stack:** Portfolio runs on **Next.js** (App Router), not Vite and not plain HTML/CSS/JS.
- **Hover:** Shared `.card-hover` / `GlassCard` hover — identical soft accent glow on About stats (University, CGPA, Focus), Skills category cards, Projects cards, Contact info boxes (email, phone, location), and Education.
- **Typography:** Display font (Space Grotesk) was falling back to Times New Roman because `--font-space` from `next/font` is set on `body`, while `--display` was computed on `:root` (where that variable does not exist). `--sans` / `--display` now resolve on `body`.
- **Navigation:** Nav/hero anchors (Home, Projects, Skills, Contact; About and Education section ids as well) overshoot because `html { scroll-padding-top }` stacked with section `scroll-margin-top`

and section padding. Offset is now `nav-offset - section padding`; scrolling uses `scrollToHash` + `scrollIntoView`.

- **Contrast / accent:** Brighter body text; accent blue limited to links, primary buttons, active nav, icons, and small borders — not decorative eyebrows/status labels.
- **Copy:** Student standing is **3rd year BSCS** (not final-year / Semester 4).
